$2.7^{+1.0}_{-1.3} \pm 1.5 \pm 3$	<sup>2</sup> KOTULLA 02	$\gamma p \rightarrow p\pi^0\gamma'$
<sup>2</sup> The second error is systematic, the third is an estimate of theoretical uncertainties.		

### **$\Delta(1232)$ FOOTNOTES**

<sup>3</sup> Using  $\pi^\pm d$  as well, PEDRONI 78 determine  $(M^- - M^{++}) + (M^0 - M^+)/3 = 4.6 \pm 0.2$  MeV.

<sup>4</sup> See HOEHLER 93 for a detailed discussion of the evidence for and the pole parameters of  $N$  and  $\Delta$  resonances as determined from Argand diagrams of  $\pi N$  elastic partial-wave amplitudes and from plots of the speeds with which the amplitudes traverse the diagrams.

<sup>5</sup> This ARNDT 95 value is in error, as pointed out by HOHLLER 01. The corrected value is in line with the ARNDT 91 value (R.A. Arndt, private communication).

<sup>6</sup> This ARNDT 97 value is very sensitive to the database being fitted. The result is from a fit to the full pion photoproduction database, apart from the BLANPIED 97 cross-section measurements.
